What Makes This 3.7V 2000mAh Li-ion Battery Special?

You know those moments when your drone suddenly drops from the sky during a perfect sunset shot? Or when your wireless security camera goes dark right as the delivery guy approaches? Chances are, a lithium-ion power cell like our 3.7V 2000mAh unit could've prevented that headache.

At Highjoule Technologies, we've been refining these energy nuggets since 2005. Our commercial battery racks actually use scaled-up versions of this same chemistry. The numbers tell the story:

Parameter	Typical Cell	Highjoule's Version
Cycle Life	300 charges	500+ charges
Self-Discharge	5%/month
