What is a battery test system - module level?The bidirectional power supply charges and discharges your cells under test with very high efficiency. The Scienlab Battery Test System - Module Level is a test platform that provides the core for a complete test setup with unique testing capabilities to validate the performance of modules for different applications. What is battery module and Pack testing?Battery module and pack testing involves very little testing of the internal chemical reactions of the individual cells. Module and pack tests typically evaluate the overall battery performance, safety, battery management systems (BMS), cooling systems, and internal heating characteristics. What is scienlab battery test system - module level?The Scienlab Battery Test System - Module Level is a test platform that provides the core for a complete test setup with unique testing capabilities to validate the performance of modules for different applications. Built as a bidirectional regenerative source and sink it performs the tests with the highest efficiency. What are module and pack tests?Module and pack tests typically evaluate the overall battery performance, safety, battery management systems (BMS), cooling systems, and internal heating characteristics. Common performance-based tests include drive-cycles, peak power capability, BMS software validation, and other application-specific characterization How long does it take to test a battery module?Diagram of battery module and pack testing in design and manufacturing. There is significantly less time available to test during production due to high throughput. Typically the system validation done on the pack level can easily take upwards of 6 minutes per unit. What are the fundamentals of battery testing?Key fundamentals of battery testing include understanding key terms such as state of charge (SOC); the battery management system (BMS) which has important functions including communication, safety and protection; and battery cycling (charge and discharge) which is the core of most tests. The testing system is a novel test platform specifically designed for high-voltage and high-capacity battery performance test of an MW-level energy storage battery container, has high power density, integrated installation and high test accuracy, and completely meets the national test standards, solving the problem that no specialized test equipment exists in the energy storage industry.
