Which scheme has the best effect on energy storage and transformer capacity? Therefore, scheme 3 (coordinated planning of energy storage and transformer capacity) has the best effect.

### 5.3.2. Economic benefit analysis of DES economic dispatching model

What is capacity configuration optimization model of industrial load and energy storage system? Capacity configuration optimization model of industrial load and energy storage system Considering the tough environment, two ESSs are compared to analysis their annual economic profitability. In addition, the proposed optimization accounts for the discount rate of fund flow.

### 3.1. Objective function

How to calculate capacity expansion cost of transformer? Capacity expansion cost of transformer  $F_{ex}$ , it can be expressed by Equation (28). Capacity expansion cost of transformer include two parts, one part is the transformer investment cost  $F_{ex}$ , it can be expressed by Equation (29), the other part is the transformer operation and maintenance cost  $F_{T,OM}$ , it can be expressed by Equation (30).

What is the optimal allocation method for DES and transformer capacity? A two-layer optimal allocation method for DES and transformer capacity is proposed to coordinate configuration of DES and transformer capacity. A DES location method based on the standard deviation of network loss sensitivity is proposed. How are energy storage capacity requirements analyzed? First, the energy storage capacity requirements is analyzed on the basis of the transformer overload requirements, and analyzing the correspondence between different capacities of energy storage and transformer expansion capacities. Does energy storage capacity allocation enhance economic benefits? It can be seen that appropriate energy storage capacity allocation highlights economic benefits. Therefore, the scheme of coordinated configuration of DES and transformer capacity is the optimal overall economy. Then, considering the net cost of coordinated planning of energy storage and transformer are minimum and the benefit of energy storage operation is maximum, a two-layer optimization model of distributed energy storage and transformer capacity is established. Then, considering the net cost of coordinated planning of energy storage and transformer are minimum and the benefit of energy storage operation is maximum, a two-layer optimization model of distributed energy storage and transformer capacity is established.
