

## energy storage formula of flat capacitor

The energy stored in a capacitor can be calculated using the formula  $E = \frac{1}{2} cv^2$ , where 'e' represents energy in joules, 'c' is the capacitance in farads, and 'v' is the voltage across the capacitor. The energy delivered by the defibrillator is stored in a capacitor and can be adjusted to fit the situation. SI units of joules are often employed. Less dramatic is the use of capacitors in microelectronics to supply energy when batteries are charged (Figure \ (\PageIndex {1})).

Capacitors are The energy stored in a capacitor (E) can be calculated using the following formula:  $E = 1/2 * C * U^2$  With : U= the voltage across the capacitor in volts (V).
