A Ragone plot (/ r?'o?ni: / r?-GOH-nee) [1] is a plot used for comparing the energy density of various energy-storing devices. On such a chart the values of specific energy (in Wh / kg) are plotted versus specific power (in W/kg).

SECTION 2: ENERGY STORAGE FUNDAMENTALS(DoD) The amount of energy that has been removed from a device as a percentage of the total energy capacity Ragone plots and discharge efficiency-power relations of electric Ragone plots (energy-power relations) and discharge efficiency-power relations are important for characterizing energy storage (ES) devices, as they contain the information Ragone plots for battery discharge optimisation Ragone plots are a useful aid to compare the performance of different energy storage devices. For batteries, the energy is typically plotted against the power for a constant power discharge.
