geological survey specifications for energy storage power stations

Hydrogen (either as a gas, liquid, or within another mol-ecule like ammonia) may store a substantial amount of chemical energy. The subsequent use of that energy through electrical fuel cells or combustion is relatively clean compared to fossil fuel usage (Ofice of Mine shafts-- Gravity Hydrogen, Methane Aquifer-- Thermal Purpose-drilled shafts-- Coal mine-- Methane, compressed air, and hydroelectric Borehole-- Thermal Salt mine-- Methane, hydrogen, and compressed air Hardrock mine-- Compressed air Depleted gas reservoirs Solution-mined salt caverns Non-potable aquifers Abandoned mines NB/T 10073--??????????????-?????·??????????????
