

# nauru lithium cannot be used for medium and large energy storage

Abstract: This study takes a large-capacity power station of lithium iron phosphate battery energy storage as the research object, based on the daily operation data of battery packs in the engineering scene of energy storage systems. Countries are scrambling to diversify sources, and Pacific Island nations are now under the microscope. Could Nauru's estimated 2.7 million metric tons of lithium carbonate equivalent (LCE) become a game-changer? Well, it's not that simple. Electrochemical energy storage technology has been widely used in grid-scale energy storage to facilitate renewable energy absorption and peak (frequency) modulation [1]. Wherein, lithium-ion battery [2] has become the main choice of electrochemical energy storage station (ESS) for its high specific energy, long life span, and environmental
