

new energy storage industry trends in march

Why is the energy storage industry growing? The U.S. energy storage industry has been observing remarkable growth due to increasing demand for efficient battery storage from different sectors such as EV, renewable energy and many more. This is pushing numerous innovative initiatives in the industry. Solid-state batteries, gravity-based ESS are some of the innovations in the field. Will energy storage grow in 2024? The energy storage sector maintained its upward trajectory in 2023, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours (MWh), year-over-year in 2023 and are expected to go beyond the terawatt-hour mark before 2030. Will energy storage growth continue through 2030? With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2023 through November and comparable levels of growth expected through the fourth quarter of 2023, energy storage investments and M&A activity are expected to continue this trajectory through 2030. What are the top 5 energy storage companies in 2023? Top 5 companies including BYD, General Electric, LG Energy Solution, Siemens and Samsung held a market share of over 40% in 2023. Many market players are operating in U.S. energy storage industry and players are working to develop cost-effective and wide range of ESS. How much money did energy storage companies raise in 2023? In 2023, they accounted for 90% of global energy storage-related fundraising deals (China for 46%, the US for 31%, and Europe for 13% respectively), raising USD 2.9 billion, USD 2 billion, and USD 800 million, respectively (Figure 1). How is the storage market changing? As the storage market grows, procurement strategies are evolving to manage supply chain risks, cost volatility, safety issues, and regulatory shifts. Utilities and developers are structuring agreements to balance financial risk and feasibility. Rapid cost declines in lithium-iron-phosphate (LFP) technology, the pivot to >6-hour battery energy storage systems (BESS), and the accelerating electrification of transport all reinforce the current growth trajectory. Rapid cost declines in lithium-iron-phosphate (LFP) technology, the pivot to >6-hour battery energy storage systems (BESS), and the accelerating electrification of transport all reinforce the current growth trajectory.
